IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A curable resin composition, eontaining an addition polymerization-based block copolymer (I) and an ethylenic unsaturated compound (II), wherein:

the addition polymerization-based block copolymer (I) is selected from block copolymers comprising at least one polymer block A and at least one polymer block B, and the hydrogenated products thereof;

the polymer block A essentially comprises an aromatic vinyl compound unit containing at least 1% by mass of an alkylstyrene-derived structural unit (a) in which at least one alkyl group having 1 to 8 carbon atoms is bound to a benzene ring; the polymer block B essentially comprises a conjugated diene compound unit; and

at least the moiety of polymer block A can undergo crosslinking upon exposure to an active energy ray.

Claim 2 (Currently Amended): The curable resin composition according to Claim 1, further containing comprising a photopolymerization initiator (III).

Claim 3 (Currently Amended): The curable resin composition according to Claim 1 or 2, further containing comprising a softener (IV).

Claim 4 (Currently Amended): The curable resin composition according to any one of claims 1 to 3 Claim 1, wherein the structural unit (a) in which at least one alkyl group having 1 to 8 carbon atoms is bound to a benzene ring is a p-methylstyrene unit.

Claim 5 (Currently Amended): A flexographic plate material, using comprising the curable resin composition according to any one of claims 1 to 4 Claim 1 as a constituent.
